P.SANJAI	24082040500111115

1. Introduction

This project focuses on importing structured employee data from an external spreadsheet into the ServiceNow platform using Import Sets and Transform Maps.

The project simulates a real-world situation where employee information is received in Excel format and needs to be efficiently migrated into ServiceNow. The spreadsheet data is first loaded into an Import Set table, which acts as a staging area. A Transform Map is then used to map the source fields to the appropriate target table fields.

After transformation, the employee records are created or updated in the target table and the results are validated.

2. Project Objective

- To import employee data from an Excel spreadsheet into ServiceNow.
- To create a custom Employee Test table.
- To create and configure an Import Set table.
- To create a Transform Map for transferring data.
- To map source fields with target fields.
- To avoid duplicate records using Coalesce.
- To validate inserted and updated records.
- To create reports based on employee data.
- To create a dashboard for displaying the reports.

3. Technologies Used

- ServiceNow
- Import Sets
- Transform Maps
- Excel / Google Spreadsheet
- ServiceNow Tables
- ServiceNow Reports
- ServiceNow Dashboards

4. Project Implementation

Phase 1: Prepare the Spreadsheet

A new Google Spreadsheet is created with sample employee data.

The spreadsheet is then downloaded in Sample Spreadsheet.xlsx format so that it can be imported into ServiceNow.

Phase 2: Create a New Custom Table

A custom table named Employee Test is created in ServiceNow.

Table Details:

- Label: Employee Test
- Name: u_employee_test

The required fields are:

- Employee ID
- Employee Name
- Email
- Department
- Location

The fields are created with String type and saved.

Phase 3: Create Import Set Table

The Import Set table is created using Load Data.

Import Set Details:

- Label: Employee Import
- Name: u_employee_import

The spreadsheet data is loaded into this Import Set table. After submitting the data, the Create Transform Map option is selected.

Phase 4: Create Transform Map

A Transform Map is created to transfer data from the Import Set table to the Employee Test table.

Transform Map Details:

- Name: Sample Spreadsheet Import
- Source Table: Employee Import
- Target Table: Employee Test

The Auto Map Matching Fields option is used, and the required fields are mapped using Mapping Assist. After completing the mapping, the Transform Map is saved.

Phase 5: Transform Data and Validate

After mapping the source and target fields, the Transform option is selected.

The transformation is executed successfully, and the imported records are created in the Employee Test table.

The records are then verified to ensure that the data has been imported correctly.

Phase 6: Enable Coalesce to Avoid Duplicate Records

Coalesce is used to prevent duplicate employee records when the same employee data is imported multiple times.

One of the mapped fields is configured with Coalesce = True.

When the same employee ID is imported again, the existing record can be updated instead of creating a duplicate record.

Phase 7: Insert New Data in Excel Format

Additional employee data is added to the Excel spreadsheet.

The updated spreadsheet is uploaded into the existing Employee Import table.

The import is then transformed using the previously created Transform Map.

The Transform History is checked to identify:

- Inserted records
- Updated records
- Ignored records

New employee IDs are inserted and existing employee records with changed information are updated. When the same sheet is uploaded again without changes, the records are ignored because there are no new changes.

5. Reports

Report 1: Employees by Department

A Pie Chart report is created to display employees according to their departments.

Configuration:

- Report Name: Employees by Department
- Source Type: Table
- Table: Employee Test
- Type: Pie Chart
- Group By: Department
- Aggregation: Count

Report 2: Employees by Location

A Bar Chart report is created to display employees according to their locations.

Configuration:

- Report Name: Employees by Location

- Table: Employee Test
- Type: Bar Chart
- Group By: Location
- Aggregation: Count

Report 3: Employee List Report

A List report is created to display employee information.

Columns Used:

- Employee ID
- Employee Name
- Email
- Department
- Location

6. Dashboard Creation

A dashboard named Employee Analytics Dashboards is created in ServiceNow.

The three reports created earlier are added to the dashboard:

1. Employees by Department
2. Employees by Location
3. Employee List Report

The reports are added using the Add to Dashboards option.

The dashboard provides a centralized view of employee information using charts and list reports.

7. Results

The project successfully demonstrates the complete employee data import process in ServiceNow.

The system supports:

- Importing employee data from Excel.
- Creating employee records.
- Updating existing employee records.
- Preventing duplicate records using Coalesce.
- Tracking import results through Transform History.
- Creating department-wise reports.
- Creating location-wise reports.
- Displaying employee information through a list report.
- Combining reports into a centralized dashboard.

8. Conclusion

This project successfully implemented an employee data management solution using ServiceNow Import Sets and Transform Maps.

The use of Coalesce helps identify existing employee records and prevents unnecessary duplicate entries. It allows existing records to be updated when new information is imported.

Reports and dashboards were also created to provide visibility into employee data, including total records, new and updated employees, department-wise distribution, and import activities.

Overall, the project demonstrates an end-to-end process of data preparation, data loading, field mapping, transformation, validation, reporting, and dashboard creation in ServiceNow.

APPENDIX – SOURCE SCREENSHOTS

Import Data using Transform Maps (Spreadsheet)

Description:

This micro project focuses on importing structured data from an external spreadsheet into the **ServiceNow** platform using Import Sets and Transform Maps. The project simulates a real-world scenario where bulk employee data is received in Excel format and must be migrated into ServiceNow efficiently and accurately. The spreadsheet data is first loaded into an Import Set table, which serves as a staging area, and a Transform Map is then configured to map source fields to the appropriate target table fields. Upon executing the transformation, records are created in the target table and validated to ensure data integrity. This project helps beginners understand the end-to-end data import process in ServiceNow, including data loading, field mapping, transformation execution, and result verification.

Step by Step process:

Phase 1: Prepare the sheets

1. Open New Google Spreadsheet
2. Create New Google Spreadsheet with sample data as shown below

Employee ID	Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Guja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Meghana Katoju	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay Kumar	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitte Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Prasanth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Ravi Teja	test10@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Srinu Nandipalli	test15@gmail.com	ServiceNow	Hyderabad

3. Download the spreadsheet as Sample Spreadsheet.xlsx format.

Source Page 2

Phase 2: Create new Custom table

Navigation:

- Tables > Create New

- Label: Employee Test
- Name: u_employee_test
- After creating and saving the **Employee Test** table, **scroll down** to the bottom of the table form.

Source Page 3

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [View Table](#)

Table: Application:

Name:

Extends table:

Create module: ☐

Create module module: ☐

Add module to menu:

New menu name:

Remove Table: ☐

Column Label	Type	Reference	Max length	Default value	Display
Employee ID	String				false
Employee Name	String				false
Email	String				false
Department	String				false
Location	String				false

- Click **Show Form** to open the table form.
- On the form, locate the **Form Context Menu / Additional Actions** option on the left side of the form header.
- Click the **Form Context Menu / Additional Actions** icon.
- Click configure , select **Form Layout**.

Submit

- The **Form Layout** page will open, where you can configure the fields displayed on the form
- After opening **Form Layout**, click **New** to create a new field.
- Enter the field details:
- **Column Label:** Employee ID
- **Type:** String
- Click **Add** to create the field.

Source Page 4

- Repeat the same steps to create the following fields:
 - **Employee Name** – Type: String
 - **Email** – Type: String
 - **Department** – Type: String
 - **Location** – Type: String
- After creating all the required fields, click **Save**.
- Verify that the newly created fields are displayed on the **Employee Test** form.

The screenshot shows a web application interface for an "Employee Test" form. At the top, there is a header bar with a back arrow, the text "Employee Test" and "New record", and a "Submit" button. Below the header, the form contains five input fields, each with a label to its left: "Employee ID", "Employee Name", "Email", "Department", and "Location". The "Employee ID" field is currently selected, indicated by a green border. Below the input fields is a large, light blue rectangular area. In the bottom-left corner of this area is a "Submit" button, and in the bottom-right corner is a small circular icon with a plus sign.

Click on Submit or Save.

Phase 3: Import Set Table

Navigation:

In Application Navigator → Load Data

Source Page 5

Click on Load Data and create an import table
Fill details as shown below

- Label: Employee Import
- Name: u_employee_import (auto populated)

A screenshot of the 'Load Data' form in ServiceNow Studio. The form is titled 'Load Data' and has a 'Submit' button. It contains several fields: 'Import set table' with a dropdown set to 'Create table'; 'Label' with the value 'Employee Import'; 'Name' with the value 'u_employee_import'; 'Source of the Import' with a dropdown set to 'File'; 'File' with the value 'Choose file: Sample Spreadsheet.xlsx'; 'Sheet number' with the value '1'; and 'Header row' with the value '1'. There is a 'Submit' button at the bottom.

- Click on Submit

Once we click on Submit, we can see the success message as shown below.

Also we need to make sure to click on Create Transform Map.

Source Page 6

Progress

Name	Import/Transform
data	Complete
Completion code	Success
Message	Processed: 13, inserts 13, updates 0, errors 0, empty and ignored 0, ignored errors 0: 0:00:01,348

Next steps...

- [Import sets](#) Go to the import sets for this data load
- [Loaded data](#) Go to the newly imported data inside the staging table: `u_employee_import`
- [Create transform map](#) Create a transform map for the newly staged data
- [Import log](#) View the import log

Phase 4: Create Transform Map

In this phase we need to create the Transform Map by clicking on the Create Transform Map button as shown in above screenshot.

Give inputs as shown below.

Name: Sample Spreadsheet Import

Source Table: Employee Import is auto-populated

Target Table: Employee Test - as we created earlier

Click on Auto Map Matching fields.

The screenshot shows the 'Table Transform Map' configuration interface. The 'Name' field is highlighted with a red box and contains 'Sample Spreadsheet Import'. The 'Source table' dropdown is set to 'Employee Import (s_employee_import)'. The 'Active' checkbox is checked. The 'Run business rules' checkbox is checked. The 'Enforce mandatory fields' dropdown is set to 'No'. The 'Copy empty fields' checkbox is unchecked. The 'Create new record on empty source fields' checkbox is unchecked. The 'Target table' dropdown is highlighted with a red box and set to 'Employee Test (s_employee_test)'. The 'Order' field is set to '300'. The 'Run script' checkbox is unchecked. The 'Submit' button is located at the bottom left. Below the 'Submit' button, there are links for 'Related Links' and 'How-to Manage Links'.

Now click on Mapping Assist and map the fields with Source & Target Table

The screenshot shows the Mapping Assistant interface. On the left, under 'Source: Employees Import', there is a list of fields: Name, Comment, Created, Created by, Email, Employee ID, Error, Import set name, and Location. Below this list are 'Save' and 'Cancel' buttons. In the center, the 'Field Map' table shows the following mappings:

Source	Target
Employee ID	Employee ID
Department	Department
Location	Location
Email	Email

On the right, under 'Target: Employees Test', there is an empty list box. To the left of this list are 'Remove', 'Add', and 'All' buttons. The 'Save' and 'Cancel' buttons are also present at the top right of the window.

Click on Save

Make sure the both Source & Target table fields are mapped as shown below.

Source Page 7

- Now click on Transform as shown below

- Now click on Transform Button as shown below.

- After clicking Transform, make sure you see the success message as shown below.

Source Page 8

Progress	Name	Transforming: RFT000001
	State	Complete
	Completion code	Success
	Message	Transformation complete

Next steps...

RFT000001 [Go to the input sets for this data load](#)

[Transform history](#) [Show the transform history, related errors and log](#)

[Input log](#) [View the input log](#)

Phase 5: Transform Data & Validate

Navigation:

- Open Employee Test Table from application navigator as shown below.

- As our import got succeeded, all the records are created in the Employee Test Table.

Source Page 9

Department	Email	Employee ID	Employee Name	Location
ServiceNow	test3@gmail.com	SB-0003	Meghana Katoju	Hyderabad

SB-0012	Rakesh Bhosani	test1@gmail.com	Salesforce	Hyderabad

Phase 6: Enable Coalesce to Avoid Duplicate Records

- In real projects, the same employee data may be imported multiple times.
- To prevent duplicate employee records, we use **Coalesce**.
- The Coalesce will update the same records with new values if we add and the duplicate values are not inserted.

Steps:

1. Open Transform map Under System LDAP On All menus.
2. Open the Created Transform map , Name is Sample Spreadsheet Import.
3. Under Related list, select the Field maps Section and Make any one field Coalesce True which appears in False.
4. Now save the form.
5. Then again add some data which is in Excel format.

PHASE 7 : Inserting New Data In Excel Format

Steps :

- Navigate to All menus.
- Search for Load data Under System Import set Open Load Data.
- Fill the details as
- Import set table as select Existing table {Employee Import}.
- Source of Import is Select File and choose the file from Files.
- Sheet number : 1, Header row : 1.
- Now Click submit.

SB-0015	Srinu Nandipati	test15@gmail.com	ServiceNow	Hyderabad

- It is the previously added data.
- Now, In this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.
- That Raviteja Employee Email was Changed to [\[test10@gmail.com\]](mailto:test10@gmail.com) → test18@gmail.com].
- And Employee ID with SB-0004 name was changed to [Ajay kumar → Ajay].
- And two other new Employee ID's are added.
- Now after submitting the form it appears as State Completed and Success.

Source Page 14

- Now Click the Run transform Under the next steps.
- Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.

Source Page 15

- Now the State is completed and Success.
- Now again click on the Transform history then it shows the newly added data and its status of Inserted and Skipped values out the given data.

This screenshot shows the 'Transform Histories' table. The table has columns for 'Started', 'State', 'Completed', 'Run time', 'Set', 'Import set table', 'Total', 'Inserts', 'Updates', 'Ignored', 'Skipped', 'Errors', and 'Transform Map'. A single row is displayed for the transformation 'Employee Import [ju_employee_import]' on '2024-01-29 03:47:37', which is in a 'Complete' state. The 'Total' is 4, 'Inserts' is 2, and 'Updates' is 2. The 'Transform Map' is 'Sample Spreadsheet Import'.

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
2024-01-29 03:47:37	Complete	2024-01-29 03:47:38	1 Second	ISET0010003	Employee Import [ju_employee_import]	4	2	2	0	0	0	Sample Spreadsheet Import

Source Page 16

- From the above figure : total 4 rows are uploaded out of 2 are Inserted that are two new ID's.
- And 2 rows are updates that are Same ID's with different Name and different Email that we changed.
- Then Open the Employee Tests table and see the rows updated and inserted.

Employee ID	Employee Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Gajja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Maghana Kothu	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Alay	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitla Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yowarth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Praventh S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Raviteja	test10@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhinav S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhosmani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sashanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Srima Nandipati	test15@gmail.com	ServiceNow	Hyderabad
SB-0016	Sri	test16@gmail.com	Airtel	Chennai
SB-0017	Naga sai	test17@gmail.com	Airtel	Hyderabad

- Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.
- Then Open the Transform history to check.

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
2024-01-29 05:39:36	Complete	2024-01-29 05:39:36	0 Seconds	ISET0010004	Employee Import [s_employee_import]	4	0	0	4	0	0	Sample Spreadsheet Import

- Here we can see the total 4 are uploaded.
- On that 0 rows are Inserted and updates 0 and Ignored 4 rows.
- That same sheet we uploaded to the same transform map we created.

Source Page 17

PHASE 8 : Create Reports on Employee Test Table

Navigation Steps :

- Open All menus, Search for **Reports**.
- Under **Usage and governance** Select Reports.
- Click the **New** button to create a new report.
- Create **3 Reports** as follows.

Report 1: Employees by Department

- In Data
- Report name : **Employees by Department**.
- Source Type : **Table**.
- Table : **Employee Test**, Now click the Next button.

Title	Table	Type	Field Name	Created by	Updated
SLA Performance Trend	Incident [incident]	Bar	opened_at	admin	2026-01-02 02:32:06
Pending Justifications	Incident [incident]	List		admin	2026-01-02 01:13:00

Compliant CI Trend	CMDR Health Scorecard [cmdr_health_scorecard]	Line		admin	2025-12-17 05:52:39

Source Page 18

- Now after Clicking next in type Select **Pie chart**.
- And click the **next** button.

- Now In Configure Select Group by **Department** Field.
- In the Aggregation Field Select **Count**.
- Then Click **next**.

Source Page 19

- Now In Style Leave the Chart color by **default**.
- And Click the **Run** button to Execute the given data Report.
- And Click **save** button to Save the Report.

Report 2: Employees by Location

Configuration

- Table: Employee Test
- Type: **Bar Chart**
- Aggregation: **Count**
- Group By: **Location**

Source Page 20

Steps :

1. Create a New Report.
2. Report name : **Employees by Location.**
3. Table Select : **Employee Test.**
4. Select Type : **Bar Chart.**
5. In Configure Select Group by Field : **Location.**
6. And Aggregation is **Count.**
7. Now Click **Run** to Execute the Report and Click the **Save** to save the Report.

Reports

PHASE 9 : Add Reports to Dashboard

Create Dashboard

Navigation :

- Open All menus → Search for Dashboards.
- Under Self Service → Click Dashboards.
- On the top right corner Click Create Dashboards or /
- You can create Directly by using the backend name [PA_DASHBOARDS.FORM].
- Then Click New to Create new Dashboards.

Source Page 25

- Only the backend name will open the form if the ACL has the **pa_dashboards** access to **Admin Overrides** True only.
- Then only we have access to the form.

- After Opening the ACL Search the **pa_dashboards** on Name Column.

Name	Decision Type	Operation	Type	Active	Updated by	Updated
pa_dashboards	Search	Search	Search	Search	Search	Search
pa_dashboards	Allow F	write	record	true	admin	2019-03-25 09:32:03
pa_dashboards	Allow F	read	record	true	admin	2016-04-19 03:29:34
pa_dashboards	Allow F	read	record	true	admin	2019-03-25 09:34:16
pa_dashboards	Allow F	report_view	record	true	admin	2022-11-16 22:19:19
pa_dashboards	Allow F	delete	record	true	admin	2016-04-19 03:26:55
pa_dashboards	Allow F	read	record	true	admin	2018-03-05 07:27:37
pa_dashboards	Allow F	create	record	true	admin	2016-01-29 22:47:37
pa_dashboards	Allow F	delete	record	true	admin	2017-03-25 09:35:29
pa_dashboards	Allow F	query_range	record	true	@@user_write_auth@	2015-09-08 22:49:16
pa_dashboards_group	Allow F	write	record	true	admin	2016-07-26 06:29:53
pa_dashboards_notifications_link_label	Allow F	query_range	record	true	@@user_write_auth@	2015-09-08 22:49:16
pa_dashboards_notifications_label	Allow F	query_range	record	true	@@user_write_auth@	2015-09-08 22:49:16
pa_dashboards_member	Allow F	write	record	true	admin	2021-11-04 08:32:01
pa_dashboards_member_no_roles	Allow F	write	record	true	admin	2016-09-08 02:00:29
pa_dashboards_member_no_roles	Allow F	query_range	record	true	@@user_write_auth@	2015-09-08 22:49:16
pa_dashboards_member_no_roles	Allow F	write	record	true	admin	2018-03-05 08:50:55

- Now Open the **Create Operation** row.

Source Page 26

- Then Click Enable the True for Admin Overrides and Update the Form.
- Then the creation of dashboards will be possible by using the backend name.
- Now Open the **PA_DASHBOARDS.FORM** create dashboard.
- Dashboard name : **Employee Analytics Dashboards.**
- **Save** the Form.

Add Reports to Dashboards.

Navigation Steps:

- Open the **Previously Created Reports.**
- On All menus → type Reports Under **Usage and Governance** select **reports.**
- Open the **Employees by Department.**
- Select the **Edit Report** and Click the **Share** button then the right top corner Select the **Add to Dashboards** Option.
- Then Choose the Created **dashboard name** and Click **Add** button.

Source Page 27

- Same Like that do the remaining 2 reports in the same navigation how we added **Employees by Department**.
- The **Employees by Location** and **Employee List Report** these two reports are also added to the created dashboard.

The screenshot shows a table of reports. The 'Reports' tab is selected and highlighted with a red box. The table lists various reports, with 'Employee List Report' and 'Employees by Location' highlighted by red boxes.

Title	Table	Type	Field Name	Created by	Updated
Employee List Report	Employee Test (s_employee_test)	List		admin	2026-01-29 20:57:32
Employees by Location	Employee Test (s_employee_test)	Bar	u_location	admin	2026-01-29 20:42:51
Employees by Department	Employee Test (s_employee_test)	Pie	u_department	admin	2026-01-29 20:39:25
SLA Performance Trend	Incident (incident)	Bar	opened_at	admin	2026-01-02 02:02:06
Pending Acknowledgments	Incident (incident)	List		admin	2026-01-02 01:13:00
Top Assignees with SLA Violations	Incident (incident)	Bar	assigned_to	admin	2026-01-01 22:54:58
Acknowledged vs Unacknowledged Breaches	Incident (incident)	Pie	u_sla_acknowledged	admin	2026-01-01 22:47:18

SLA Breaches by Reason	Incident (incident)	Pie	u_sla_breach_reason	admin	2026-01-01 22:15:34

- After Opening the Report Click the **View Report** Button on the right side of the Context menu.

Source Page 28

- After Clicking the View Report button, Now Click the **Share** button and then share options are visible on the right side.
- Now click the **Add to Dashboards**.

- Now Add the Dashboard that you created called **Employee Analytics Dashboards**.
- Then Click **Add** button.
- Now the **Report** is added to the **dashboards**.
- Now, Same in the process, add the remaining **two reports** to the **dashboard**.

Source Page 29

- From the + icon also we add widgets that our reports from there.
- If we want we can also configure the background color.

Source Page 30

- Here the three Reports are added successfully by varying **Department , Location and List Report.**
- We can also restrict the **Users,Groups and Roles** From Share Option.

Conclusion:

1. This project successfully implemented an automated employee data management solution using ServiceNow Import Sets and Transform Maps, ensuring accuracy, efficiency, and data integrity throughout the employee onboarding and update process.
2. A key enhancement in this project was the use of Coalesce in the Transform Map. By enabling Coalesce on the Employee ID field, the system intelligently identifies existing employee records during every import. This prevents the creation of duplicate records and ensures that repeated imports update existing data instead of inserting redundant entries. As a result, the employee database remains clean, reliable, and consistent, which is critical in real-world enterprise environments where data may be imported multiple times from external systems.
3. In addition to data integrity, the project was extended with Reports and Dashboards to provide meaningful insights and real-time visibility into employee data and import activities. Custom reports were created to track:

Source Page 31

- Total employee records.
 - Newly added employees.
 - Updated employee records.
 - Department-wise employee distribution.
 - Import success and error counts.
4. These reports were then consolidated into a Dashboard, allowing administrators and HR teams to monitor employee data trends, import performance, and data quality from a single centralized view. Dashboards improved decision-making by presenting information visually through charts and graphs, reducing the need for manual analysis.
